EE2100: Matrix Theory Quiz - 2

Please Note:

1. If there are any inconsistencies in grading, please use the google form shared with you.

Group 1

(One among the following set of questions)

1. (3 points) Consider the problem of computing the orthonormal basis of the subspace using the Grahm Schmidt Approach. Let \mathbb{W} denote the subspace spanned by the vectors $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3\} \in \mathcal{R}^3$ where

$$\mathbf{v}_{1} = \begin{bmatrix} 1 \\ a \\ 0 \end{bmatrix}, \mathbf{v}_{2} = \begin{bmatrix} 0 \\ 0 \\ b \end{bmatrix} \text{ and, } \mathbf{v}_{3} = \begin{bmatrix} c \\ 0 \\ 0 \end{bmatrix}$$

$$(1)$$

The first entry of the third orthonormal basis vector for the subspace \mathbb{W} is (Please Note: Apply the Grahm Schmit algorithm by considering vectors in the following order, i.e., $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3\}$)

Solution: Let $\{\mathbf{b}_1, \mathbf{b}_2, \mathbf{b}_3\}$ denote the orthogonal basis of \mathbb{W} obtained using Grahm Schmidt Approach. Accordingly,

$$\mathbf{b}_{1} = \mathbf{v}_{1} = \begin{bmatrix} 1 \\ a \\ 0 \end{bmatrix}, \mathbf{b}_{2} = \mathbf{v}_{2} - \underbrace{\mathbf{Proj}_{\mathbf{b}_{1}} \mathbf{v}_{2}}_{\mathbf{0} \text{ since } \mathbf{v}_{2} \perp \mathbf{b}_{1}} = \begin{bmatrix} 0 \\ 0 \\ b \end{bmatrix}, \mathbf{b}_{3} = \mathbf{v}_{3} - \mathbf{Proj}_{\mathbf{b}_{1}} \mathbf{v}_{3} - \mathbf{Proj}_{\mathbf{b}_{2}} \mathbf{v}_{3} \text{ where}$$

$$\mathbf{Proj}_{\mathbf{b}_{1}} \mathbf{v}_{3} = \frac{c}{1 + a^{2}} \begin{bmatrix} 1 \\ a \\ 0 \end{bmatrix} \text{ and } \mathbf{Proj}_{\mathbf{b}_{2}} \mathbf{v}_{3} = \mathbf{0}. \text{ Accordingly, } \mathbf{b}_{3} = \begin{bmatrix} \frac{a^{2}c}{1 + a^{2}} \\ -\frac{ac}{1 + a^{2}} \\ 0 \end{bmatrix}$$

$$(2)$$

The third orthonormal basis vector of the subspace is thus

$$\mathbf{e}_{\mathbf{b}_{3}} = \frac{\mathbf{b}_{3}}{\|\mathbf{b}_{3}\|} = \begin{bmatrix} \frac{a}{1+a^{2}} \\ -\frac{1}{1+a^{2}} \\ 0 \end{bmatrix}$$
(3)

The final answer to the question is $\frac{a}{1+a^2}$ and the exact value depends on the value of a given in the question.

2. (3 points) Consider the problem of computing the orthonormal basis of the subspace using the Grahm Schmidt Approach. Let \mathbb{W} denote the subspace spanned by the vectors $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3\} \in \mathcal{R}^3$ where

$$\mathbf{v}_{1} = \begin{bmatrix} 1 \\ a \\ 0 \end{bmatrix}, \mathbf{v}_{2} = \begin{bmatrix} 0 \\ 0 \\ b \end{bmatrix} \text{ and, } \mathbf{v}_{3} = \begin{bmatrix} c \\ 0 \\ 0 \end{bmatrix}$$

$$(4)$$

The second entry of the third orthonormal basis vector for the subspace \mathbb{W} is (Please Note: Apply the Grahm Schmit algorithm by considering vectors in the following order, i.e., $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3\}$)

Solution: Let $\{\mathbf{b}_1, \mathbf{b}_2, \mathbf{b}_3\}$ denote the orthogonal basis of \mathbb{W} obtained using Grahm Schmidt Approach. Accordingly,

$$\mathbf{b}_{1} = \mathbf{v}_{1} = \begin{bmatrix} 1 \\ a \\ 0 \end{bmatrix}, \mathbf{b}_{2} = \mathbf{v}_{2} - \underbrace{\mathbf{Proj}_{\mathbf{b}_{1}} \mathbf{v}_{2}}_{\mathbf{0} \text{ since } \mathbf{v}_{2} \perp \mathbf{b}_{1}} = \begin{bmatrix} 0 \\ 0 \\ b \end{bmatrix}, \mathbf{b}_{3} = \mathbf{v}_{3} - \mathbf{Proj}_{\mathbf{b}_{1}} \mathbf{v}_{3} - \mathbf{Proj}_{\mathbf{b}_{2}} \mathbf{v}_{3} \text{ where}$$

$$\mathbf{Proj}_{\mathbf{b}_{1}} \mathbf{v}_{3} = \frac{c}{1 + a^{2}} \begin{bmatrix} 1 \\ a \\ 0 \end{bmatrix} \text{ and } \mathbf{Proj}_{\mathbf{b}_{2}} \mathbf{v}_{3} = \mathbf{0}. \text{ Accordingly, } \mathbf{b}_{3} = \begin{bmatrix} \frac{a^{2}c}{1 + a^{2}} \\ -\frac{ac}{1 + a^{2}} \\ 0 \end{bmatrix}$$

$$(5)$$

The third orthonormal basis vector of the subspace is thus

$$\mathbf{e}_{\mathbf{b}_{3}} = \frac{\mathbf{b}_{3}}{\|\mathbf{b}_{3}\|} = \begin{bmatrix} \frac{a}{1+a^{2}} \\ -\frac{1}{1+a^{2}} \\ 0 \end{bmatrix}$$
 (6)

The final answer to the question is $-\frac{1}{1+a^2}$ and the exact value depends on the value of a given in the question.

Group 2

(One among the following set of questions)

1. (3 points) Consider the problem of expressing the vector $\mathbf{v} \in \mathcal{R}^3$ as a linear combination of combination of the

basis vectors
$$\left\{ \begin{bmatrix} 1\\1\\1\\1 \end{bmatrix}, \begin{bmatrix} 0\\-1\\1\\1 \end{bmatrix}, \begin{bmatrix} -2\\1\\1\\1 \end{bmatrix} \right\}$$
 i.e., $\mathbf{v} = \sum_{i=1}^{3} \alpha_i \mathbf{b}_i$. Let $\mathbf{v} = \begin{bmatrix} x\\y\\z \end{bmatrix}$. Compute the coefficient of linear combination α_3 .

IIT Hyderabad Page 2 of 6 August 31, 2023

Solution: The given basis vectors are orthogonal. Thus,

$$\alpha_3 = \frac{\mathbf{v} \cdot \mathbf{b}_3}{\|\mathbf{b}_3\|^2} = \frac{y + z - 2x}{6} \tag{7}$$

The final answer depends on the values of x, y and z given in the question.

2. (3 points) Consider the problem of expressing the vector $\mathbf{v} \in \mathbb{R}^3$ as a linear combination of combination of the

basis vectors
$$\left\{ \begin{bmatrix} 1\\1\\1\\1 \end{bmatrix}, \begin{bmatrix} 0\\-1\\1\\1 \end{bmatrix}, \begin{bmatrix} -2\\1\\1\\1 \end{bmatrix} \right\}$$
 i.e., $\mathbf{v} = \sum_{i=1}^{3} \alpha_{i} \mathbf{b}_{i}$. Let $\mathbf{v} = \begin{bmatrix} x\\y\\z \end{bmatrix}$. Compute the coefficient of linear combination α_{1} .

Solution: The given basis vectors are orthogonal. Thus,

$$\alpha_1 = \frac{\mathbf{v} \cdot \mathbf{b}_1}{\|\mathbf{b}_1\|^2} = \frac{x+y+z}{3} \tag{8}$$

The final answer depends on the values of x, y and z given in the question.

3. (3 points) Consider the problem of expressing the vector $\mathbf{v} \in \mathcal{R}^3$ as a linear combination of combination of the

basis vectors
$$\left\{ \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}, \begin{bmatrix} 0 \\ -1 \\ 1 \end{bmatrix}, \begin{bmatrix} -2 \\ 1 \\ 1 \end{bmatrix} \right\}$$
 i.e., $\mathbf{v} = \sum_{i=1}^{3} \alpha_{i} \mathbf{b}_{i}$. Let $\mathbf{v} = \begin{bmatrix} x \\ y \\ z \end{bmatrix}$. Compute the coefficient of linear combination α_{2} .

Solution: The given basis vectors are orthogonal. Thus,

$$\alpha_2 = \frac{\mathbf{v} \cdot \mathbf{b}_2}{\|\mathbf{b}_2\|^2} = \frac{z - y}{2} \tag{9}$$

The final answer depends on the values of y and z given in the question.

Group 3

(One among the following set of questions)

1. (1 point) For some $\mathbf{a}, \mathbf{b} \in \mathcal{R}^n$, that satisfy $\mathbf{b} \neq \alpha \mathbf{a}$, $\mathbf{Proj_ab} = \mathbf{0}$

- A. True
- B. False

Solution: For any pair of orthogonal vectors $\mathbf{a}, \mathbf{b} \in \mathbb{R}^n$, $\mathbf{Proj_ab} = \mathbf{0}$.

- 2. (1 point) For all $\mathbf{a}, \mathbf{b} \in \mathcal{R}^n$, that satisfy $\mathbf{b} \neq \alpha \mathbf{a}$, $\mathbf{Proj_ab} = \mathbf{0}$
 - A. True
 - B. False

Solution: Only if $\mathbf{a}, \mathbf{b} \in \mathbb{R}^n$ orthogonal (or one of them is a zero-vector), $\mathbf{Proj_ab} = \mathbf{0}$.

Group 4

(One among the following set of questions)

- 1. (1 point) Consider all possible sets of 3 linearly independent vectors (denoted by say, $\mathbf{a}, \mathbf{b}, \mathbf{c} \in \mathcal{R}^3$) such that $\mathbf{b} \perp \mathbf{a}$. Let $\mathbf{d} = \mathbf{c} - \mathbf{Proj_b}\mathbf{c} - \mathbf{Proj_a}\mathbf{c}$. Then, $\mathbf{d} \perp \mathbf{b}$ and $\mathbf{d} \perp \mathbf{a}$.
 - A. True
 - B. False

Solution: A simple way to prove the given statement is as follows.

$$\mathbf{d} \cdot \mathbf{a} = (\mathbf{c} - \mathbf{Proj_b} \mathbf{c} - \mathbf{Proj_a} \mathbf{c}) \cdot \mathbf{a}$$

$$= (\mathbf{c} - (\mathbf{c} \cdot \mathbf{e_b}) \mathbf{e_b} - (\mathbf{c} \cdot \mathbf{e_a}) \mathbf{e_a}) \cdot \mathbf{a}$$

$$= \mathbf{c} \cdot \mathbf{a} - (\mathbf{c} \cdot \mathbf{e_b}) \underbrace{\mathbf{e_b} \cdot \mathbf{a}}_{0} - \underbrace{(\mathbf{c} \cdot \mathbf{e_a}) \mathbf{e_a} \cdot \mathbf{a}}_{\mathbf{c} \cdot \mathbf{a}} = 0 \implies \mathbf{d} \perp \mathbf{a}$$
Similarly,
$$\mathbf{d} \cdot \mathbf{b} = (\mathbf{c} - \mathbf{Proj_b} \mathbf{c} - \mathbf{Proj_a} \mathbf{c}) \cdot \mathbf{b}$$

$$= (\mathbf{c} - (\mathbf{c} \cdot \mathbf{e_b}) \mathbf{e_b} - (\mathbf{c} \cdot \mathbf{e_a}) \mathbf{e_a}) \cdot \mathbf{b}$$

$$= \mathbf{c} \cdot \mathbf{b} - \underbrace{(\mathbf{c} \cdot \mathbf{e_b}) \mathbf{e_b} \cdot \mathbf{b}}_{\mathbf{c} \cdot \mathbf{b}} - (\mathbf{c} \cdot \mathbf{e_a}) \underbrace{\mathbf{e_a} \cdot \mathbf{b}}_{0} = 0 \implies \mathbf{d} \perp \mathbf{b}$$

$$= \mathbf{c} \cdot \mathbf{b} - \underbrace{(\mathbf{c} \cdot \mathbf{e_b}) \mathbf{e_b} \cdot \mathbf{b}}_{\mathbf{c} \cdot \mathbf{b}} - (\mathbf{c} \cdot \mathbf{e_a}) \underbrace{\mathbf{e_a} \cdot \mathbf{b}}_{0} = 0 \implies \mathbf{d} \perp \mathbf{b}$$

- 2. (1 point) Consider all possible sets of 3 linearly independent vectors (denoted by say, $\mathbf{a}, \mathbf{b}, \mathbf{c} \in \mathcal{R}^3$). Let $\mathbf{d} = \mathbf{c} \mathbf{Proj_b} \mathbf{c} \mathbf{Proj_a} \mathbf{c}$. Then, $\mathbf{d} \perp \mathbf{b}$ and $\mathbf{d} \perp \mathbf{a}$.
 - A. True
 - B. False

Solution: A simple way to disprove the given statement is as follows.

$$\mathbf{d} \cdot \mathbf{a} = (\mathbf{c} - \mathbf{Proj_b} \mathbf{c} - \mathbf{Proj_a} \mathbf{c}) \cdot \mathbf{a}$$

$$= (\mathbf{c} - (\mathbf{c} \cdot \mathbf{e_b}) \mathbf{e_b} - (\mathbf{c} \cdot \mathbf{e_a}) \mathbf{e_a}) \cdot \mathbf{a}$$

$$= \mathbf{c} \cdot \mathbf{a} - (\mathbf{c} \cdot \mathbf{e_b}) \underbrace{\mathbf{e_b} \cdot \mathbf{a}}_{\neq 0} - \underbrace{(\mathbf{c} \cdot \mathbf{e_a}) \mathbf{e_a} \cdot \mathbf{a}}_{\mathbf{c \cdot a}} \neq 0 \implies \mathbf{d} \text{ is not orthogonal to } \mathbf{a}$$
(11)

Group 5

- 1. Consider all possible $\mathbf{a}, \mathbf{b}, \mathbf{c} \in \mathcal{R}^3$ such that $\mathbf{a} \perp \mathbf{b}$ and $\mathbf{b} \perp \mathbf{c}$. Then $\mathbf{a} \perp \mathbf{c}$.
 - A. True
 - B. False

Solution: A counter example to the given statement is the set of vectors a, b, c given by

$$\mathbf{a} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}, \mathbf{b} = \begin{bmatrix} 0 \\ -1 \\ 1 \end{bmatrix} \text{ and, } \mathbf{c} = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$$
 (12)

For the chosen set of vectors $\mathbf{a} \perp \mathbf{b}$ and $\mathbf{b} \perp \mathbf{c}$. But, \mathbf{a} is not orthogonal to \mathbf{c} .

Group 6

(One among the following set of questions)

1. (3 points) The coordinate vector of
$$\mathbf{x} \in \mathcal{R}^3$$
 in basis $\mathcal{B} = \left\{ \underbrace{\begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}}, \underbrace{\begin{bmatrix} 0 \\ -1 \\ 1 \end{bmatrix}}, \underbrace{\begin{bmatrix} -2 \\ 1 \\ 1 \end{bmatrix}}_{\mathbf{b}_2}, \text{ is } \mathbf{x}_{\mathbb{B}}. \text{ If } \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \text{ the } \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}, \mathbf{x}_{\mathbb{B}}$

first entry of \mathbf{x} in the standard basis is

Solution: The vector x in the standard basis is given by

$$\mathbf{x} = \mathbf{x}_{\mathbb{B}}[1]\mathbf{b}_{1} + \mathbf{x}_{\mathbb{B}}[2]\mathbf{b}_{2} + \mathbf{x}_{\mathbb{B}}[3]\mathbf{b}_{3} = \begin{bmatrix} a - 2c \\ a - b - c \\ a + b + c \end{bmatrix}$$
(13)

The final answer to the question is a-2c and the exact value depends on the values of a, b and c given in the question.

2. (3 points) The coordinate vector of
$$\mathbf{x} \in \mathcal{R}^3$$
 in basis $\mathcal{B} = \left\{ \underbrace{\begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}}_{\mathbf{b}_1}, \underbrace{\begin{bmatrix} 0 \\ -1 \\ 1 \end{bmatrix}}_{\mathbf{b}_2}, \underbrace{\begin{bmatrix} -2 \\ 1 \\ 1 \end{bmatrix}}_{\mathbf{b}_3} \right\}$ is $\mathbf{x}_{\mathbb{B}}$. If $\mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}$, the

second entry of \mathbf{x} in the standard basis is

Solution: The vector x in the standard basis is given by

$$\mathbf{x} = \mathbf{x}_{\mathbb{B}}[1]\mathbf{b}_{1} + \mathbf{x}_{\mathbb{B}}[2]\mathbf{b}_{2} + \mathbf{x}_{\mathbb{B}}[3]\mathbf{b}_{3} = \begin{bmatrix} a - 2c \\ a - b + c \\ a + b + c \end{bmatrix}$$
(14)

The final answer to the question is a - b + c and the exact value depends on the values of a, b and c given in the question.

3. (3 points) The coordinate vector of
$$\mathbf{x} \in \mathcal{R}^3$$
 in basis $\mathcal{B} = \left\{ \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}, \begin{bmatrix} 0 \\ -1 \\ 1 \end{bmatrix}, \begin{bmatrix} -2 \\ 1 \\ 1 \end{bmatrix} \right\}$ is $\mathbf{x}_{\mathbb{B}}$. If $\mathbf{x}_{\mathbb{B}} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}$, the

third entry of \mathbf{x} in the standard basis is

Solution: The vector x in the standard basis is given by

$$\mathbf{x} = \mathbf{x}_{\mathbb{B}}[1]\mathbf{b}_{1} + \mathbf{x}_{\mathbb{B}}[2]\mathbf{b}_{2} + \mathbf{x}_{\mathbb{B}}[3]\mathbf{b}_{3} = \begin{bmatrix} a - 2c \\ a - b + c \\ a + b + c \end{bmatrix}$$
(15)

The final answer to the question is a + b + c and the exact value depends on the values of a, b and c given in the question.
